Technical Skills

Strong: HTML5, CSS3, Javascript, jQuery, Bootstrap, Github, AJAX, Media Buys, Paid Advertising

Experience: PHP, AngularJS, AWS, MySQL

Applications Developed

Ramrod [Demo Github](#)

- With the collaboration of 5 developers, created an application that finds the most relevant youtube video of an artist's music, tweets about them, and all the venue's they performed at in California.
- My contribution was the functionality of the youtube **API** using **Javascript** and **jQuery**, the creation of **Bootstrap** layout and all the functionalities with the interaction of the DOM.

Scooby-Doo Memory Match [Demo Github](#)

- This is a web application 18 card game that was created based on memory match with a theme of Scooby-Doo.
- Through the use of **Javascript** and **jQuery** a game board is dynamically created, with each matching pair creates a different interaction with the DOM.

Calculator [Demo Github](#)

- A web application of a calculator that takes in two numbers and operators. The layout of application was done in **HTML5**, **CSS3** and utilized **jQuery** and **Javascript** for all functionality.

Student Grade Table [Demo Github](#)

- This application is based on CRUD (Create, Read, Update, Delete), managing a database of students with corresponding assignments and grades. With **AJAX** calls dynamically updating and deleting the information.
- **HTML5** and **bootstrap** was used to build the skeleton and style this management tool.
